

## WHAT IS REFLEX?

A durable UV-resistant and easy-to-clean marine foam padding, reFLEX is made to withstand the rigors of water and any weather condition. Manufactured from closed-cell Polyethylene (PE) foam, reFLEX offers a high-grip, non-slip surface that teak covering on traditional boats and molded textures and non-skid paints on modern fiberglass boats simply can't match. reFLEX comes in a wide variety of colors, combinations and custom patterns and graphics to fit all types of applications.

## WHY IS REFLEX BETTER?

Some flooring applications easily lose their adhesive bond and are magnets for mold and mildew. With its firm grip, reFLEX is made to stay put, while resisting the damage of freshwater and saltwater and repelling moisture to protect your deck. reFLEX is also highly durable, keeping it safe from scratches, dings, and dents, and its shock-absorbency makes it tough enough to withstand tearing and stretching. Another plus for fishermen is its noise-reducing capabilities and fish-blood stain resistance, which helps them effortlessly reel in the big ones with little cleanup.

## HOW IS REFLEX APPLIED?

Perfect padding is just a peel and stick away! reFLEX is manufactured with 3M pressure-sensitive adhesive backing that makes application quick and easy, with no mess. Once applied, 3M adhesive strength makes it stay put regardless of water, winds, and speed.
